Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at The Quays Medical (GP) Practice on 20 September 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.

- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

We saw some areas of outstanding practice, examples included:

- The continuing support to patients registered as part of the Violent Allocation Scheme (VAS) was integral to ensuring high quality continued care. For

Summary of findings

example, the practice offered a 'non-judgemental' service to patients registered in this scheme and completed a risk assessment for all patients registering including a 12 month rehabilitation period. Patients were then offered an opportunity to register with a practice of their choice. Since the start of the scheme the practice manager told us that approximately 50% of the patients that originally registered had stayed and registered with the practice.

- The practice had implemented a system whereby homeless people could use services directly with the

practice. For example, the practice had organised support evenings on the practice premises where a stall was set up to distribute clothing, warm food, drinks and toiletries to homeless people. Staff also searched the local area of Hull City to hand out provisions to homeless people. This service was communicated to homeless people via different community channels for example hostels, soup kitchens and word of mouth.

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When there were unintended or unexpected safety incidents, people received reasonable support, truthful information, a verbal and written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep people safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were similar to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice worse than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment. However, some patients we spoke with had varied positive and negative comments about the service.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, maintained patient confidentiality and kept information secure.

Good

Summary of findings

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. The practice worked with the CCG and the community professionals to identify their patients who were at high risk of attending accident and emergency or having an unplanned admission to hospital.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Patients said they sometimes found it difficult to make an appointment with a named GP but that there was continuity of care, with urgent appointments available the same day using the open access service.
- Information about how to complain was available and easy to understand and evidence showed that the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. There was an active patient participation group (PPG).

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- It was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions (LTCs).

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Nationally reported data for 2014/2015 showed that outcomes for patients with long term conditions were good. For example, p
- Longer appointments and home visits were available when needed.
- All of these patients had a named GP and a structured annual review to check that their health and medicines needs were being met. For those people with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk. For example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Nationally reported data from 2014/2015 showed patients diagnosed with asthma, on the register, who had had an asthma review in the last 12 months was 74%, which was similar to the local CCG average of 76% and similar to the national average of 75%.

Good

Summary of findings

- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- Nationally reported data from 2014/2015 showed the practice's uptake for the cervical screening programme was 85%, which was similar to the local CCG average of 82% and similar to the national average of 82%.
- We were provided with evidence saw positive examples of joint working with 'The Gateway Project'. This scheme offered new refugee arrivals into the North of England, screening clinics and joint working with other health care agencies.
- Appointments were available outside of school hours and the premises were suitable for children and babies.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflected the needs for this age group.

Good

People whose circumstances may make them vulnerable

The practice is rated as outstanding for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- The practice supported patients who were socially excluded for example, homeless people, sex industry workers, substance misuse and patients allocated under the violent patient scheme.
- The continuing support to patients registered as part of the Violent Allocation Scheme (VAS) was integral to ensuring high quality continued care. For example, the practice offered a

Outstanding

Summary of findings

‘non-judgemental’ service to patients registered in this scheme and completed a risk assessment for all patients registering including a 12 month rehabilitation period. Patients were then offered an opportunity to register with a practice of their choice. Since the start of the scheme the practice manager told us that approximately 50% of the patients that originally registered had stayed and registered with the practice.

- The practice had implemented a system whereby homeless people could use services directly with the practice. For example, the practice had organised support evenings on the practice premises where a stall was set up to distribute clothing, warm food, drinks and toiletries to homeless people. Staff also searched the local area of Hull City to hand out provisions to homeless people. This service was communicated to homeless people via different community channels for example hostels, soup kitchens and word of mouth.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- Nationally reported data from 2014/2015 showed the percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who had a comprehensive care plan documented in their record, in the preceding 12 months was 88%. This was similar to the local CCG average of 88% and similar to the national average of 88%.
- Nationally reported data from 2014/2015 showed 100% of people diagnosed with dementia had their care reviewed in a face to face meeting in the last 12 months. This was better than the local CCG average of 86% and better than the national average of 84%.
- The practice regularly worked with multi-disciplinary teams in the case management of people experiencing poor mental health, including those with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.

Good

Summary of findings

- It had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support people with mental health needs and dementia.

Summary of findings

What people who use the service say

The national GP patient survey results were published on 7 July 2016. 357 survey forms were distributed and 71 were returned. This represented 2.4% of the practice's patient list. The results showed mixed performance by the practice. Some results were worse than the local CCG and national averages, for example:

- 73% were able to get an appointment to see or speak to someone the last time they tried compared with the local CCG average of 80% and national average of 85%.
- 92% said the last appointment they got was convenient compared with the local CCG average of 92% and national average of 92%.
- 80% said the last GP they saw was good at explaining tests and treatments compared to the local CCG average of 83% and national average of 86%.
- 72% said the last GP they saw was good at involving them in decisions about their care compared to the local CCG average of 77% and national average of 82%.
- 65% describe their experience of making an appointment as good compared to the local CCG average of 70% and national average of 73%.

- 48% usually wait 15 minutes or less after their appointment time to be seen compared to the local CCG average of 69% and national average of 65%.

As part of our inspection we asked for CQC comment cards to be completed by patients prior to our inspection. We received 15 comment cards which were generally positive about the standard of care received. However, four cards commented about their negative experience using the service in respect of obtaining appointments in a timely manner.

We spoke with 17 patients during the inspection including one member of the PPG. Some of the 17 patients we spoke with had varied positive and negative comments about the service. For example, patients said staff were polite and helpful and treated them with dignity and respect and other patients described the difficulty in getting appointments and that consultation times were too short. We spoke with the provider about this and they had recently submitted a project proposal paper to the CCG which also included 23 other practices in the local area to pilot a new software tool that allows patients to book, cancel, check or change appointments 24/7 365 days a year using a telephone.

Areas for improvement

Outstanding practice

- The continuing support to patients registered as part of the Violent Allocation Scheme (VAS) was integral to ensuring high quality continued care. For example, the practice offered a 'non-judgemental' service to patients registered in this scheme and completed a risk assessment for all patients registering including a 12 month rehabilitation period. Patients were then offered an opportunity to register with a practice of their choice. Since the start

of the scheme the practice manager told us that approximately 50% of the patients that originally registered had stayed and registered with the practice.

- The practice had implemented a system whereby homeless people could use services directly with the practice. For example, the practice had organised support evenings on the practice premises where a stall was set up to distribute clothing, warm food, drinks and toiletries to homeless people. Staff also searched the local area of Hull City to hand out

Summary of findings

provisions to homeless people. This service was communicated to homeless people via different community channels for example hostels, soup kitchens and word of mouth.

City Health Care Partnership CIC - The Quays Medical (GP) Practice

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist advisor and an expert by experience.

Background to City Health Care Partnership CIC - The Quays Medical (GP) Practice

The Quays Medical (GP) Practice is situated in the centre of the City of Hull and provides services under an Alternative Provider Medical Services (APMS) contract with the NHS England, Hull Area Team to the practice population of 2,962, covering patients of all ages.

The practice has two salaried GPs who are both male, an advanced nurse practitioner, a nurse prescriber, a practice nurse, a clinical pharmacist and two health care assistants. There is a practice manager, a central data quality manager and a team of secretarial, administration and reception staff.

The practice is open between 8am and 6.30pm Monday to Friday. Saturday Nurse led appointments are available from 8.30am to 12pm at another site location. The practice, along with all other practices in the Hull CCG area have a

contractual agreement for NHS 111 service to provide Out of Hours (OOHs) services from 6.30pm. This has been agreed with the NHS England area team. Information for patients requiring urgent medical attention out of hours is available in the waiting area, in the practice information leaflet and on the practice website.

The proportion of the practice population in the 10-14 years age group is significantly lower than the England average. The practice population in the 55-75 years age group is lower than the England average. The practice also has 38% of its registered list as non-English speaking patients. The practice scored one on the deprivation measurement scale, which is the most deprived. People living in more deprived areas tend to have greater need for health services. The overall practice deprivation score is worse than the England average, the practice is 53.2 and the England average is 21.8.

Why we carried out this inspection

We inspected this service as part of our comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal

Detailed findings

requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Before visiting, we reviewed a range of information that we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 20 September 2016.

During our visit we:

- Spoke with a range of staff including one GP, one nurse, one pharmacist and one health care assistant. We also spoke with the practice manager; two reception staff and three questionnaires were completed by administration, secretarial and reception staff.
- Spoke with 17 patients who used the service including one PPG member and reviewed 15 patient comment cards during the inspection.
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Observed how staff spoke to, and interacted with patients when they were in the practice and on the telephone.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services are provided for specific groups of people and what good care looks like for them. The population groups are:

- Older people.
- People with long-term conditions.
- Families, children and young people.
- Working age people (including those recently retired and students).
- People whose circumstances may make them vulnerable.
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.
- We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed.

We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, a prescription error had indicated incorrect medication amounts to be dispensed. This was identified by the relevant dispensing pharmacy and the practice was contacted. The practice had identified the recording error.

Safety alerts were disseminated to staff and action taken was routinely followed up and documented.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep people safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard adults and children from abuse that reflected relevant legislation and local requirements. Policies and procedures were accessible to all staff. There was a lead member of staff for safeguarding. The GP attended safeguarding meetings when possible and always provided reports

where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. GPs were trained to Safeguarding level 3.

- Information telling patients that they could ask for a chaperone was visible in the reception area. Nursing staff and receptionist staff acted as chaperones and understood their responsibilities, including where to stand to be able to observe the examination. Nursing staff and receptionist staff had received a disclosure and barring check (DBS). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice had a 'Health Check' information booklet to assist patients in identifying a range of general health matter for example weight, medication, mobility and general health concerns. This was used prior to health checks by the practice and it was produced in easy read format to suit different patients' needs.
- The practice maintained appropriate standards of cleanliness and hygiene. The nurse practitioner was the infection prevention and control (IPC) lead who liaised with the local IPC teams to keep up to date with best practice. There was an infection control protocol in place and staff had received training.
- The arrangements for managing medicines, including emergency drugs and vaccinations, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing and security). The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use.
- We reviewed three personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Are services safe?

- There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patients and staff safety. There was a health and safety policy available with a poster in the reception office. The practice had a fire risk assessment and a fire warden in place. Staff we spoke with were able to describe the action they would take in the event of a fire. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice also had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health, infection control and legionella.
- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a system in place for

all the different staffing groups to ensure that enough staff were on duty. Staff we spoke with told us they provided cover for sickness and holidays and further locums were engaged when required.

Arrangements to deal with emergencies and major incidents

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks
- A first aid kit and accident book was available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met peoples' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected from the Quality Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). Results from 2014/2015 showed the practice achieved 87.5% of the total number of points available. This was below the local CCG average of 94% and the national average of 95%. Data from 2014/15 showed;

- Performance for diabetes related indicators was 88% which was similar to the local CCG average of 89% and similar to the national average of 89%.
- Performance for mental health related indicators was 96% which was similar to the local CCG average of 92% and similar to the national average of 93%.
- The percentage of patients with Chronic Obstructive Pulmonary Disease (COPD) who had had a review, undertaken by a healthcare professional, including an assessment of breathlessness in the preceding 12 months was 70%. This was below the local CCG average of 90% and below the national average of 90%.
- The percentage of patients with asthma who had had an asthma review in the preceding 12 months was 74%, which was similar to the CCG and the national average.

Clinical audits demonstrated quality improvement.

- We saw records that there had been clinical audits completed in the last two years, and these were completed audits where the improvements were monitored and shared with the practice team.
- The practice participated in applicable local audits, national benchmarking, accreditation, peer review and research.
- Clinical audit findings were used by the practice to improve services. For example, an audit was undertaken to determine if the practice was monitoring patients with a particular medication and whether they were monitored in-line with national guidance. The practice had identified three patients that had been on a particular medication and all had a full review and blood test carried out in-line with national guidance. Due to the nature of the patients' health it was not always possible to contact them directly and it was identified that other services had undertaken the patient review in a timely manner.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for newly appointed members of staff and contracted locums that covered such topics as safeguarding, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff e.g. for those reviewing patients with long-term conditions, administering vaccinations and taking samples for the cervical screening programme.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet these learning needs and to cover the scope of their work. This included ongoing support during sessions, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and facilitation and support for the revalidation of doctors. All staff had had an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire procedures, basic life support and information governance awareness. Staff had access to and made use of e-learning training modules and in-house training.

Are services effective?

(for example, treatment is effective)

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and test results. Information such as NHS patient information leaflets was also available.
- The practice shared relevant information with other services in a timely way, for example when people were referred to other services.

Staff worked together, and with other health and social care services to understand and meet the range and complexity of people's needs and to assess and plan ongoing care and treatment. This included when people moved between services, including when they were referred, or after they were discharged from hospital. We saw evidence that multi-disciplinary team meetings took place and that care plans were routinely reviewed and updated.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, where appropriate, recorded the outcome of the assessment.
- The process for seeking consent was monitored through records audits to ensure it met the practices responsibilities within legislation and followed relevant national guidance.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support.

- These included patients in the last 12 months of their lives, carers, those at risk of developing a long-term condition, those requiring advice on their diet, smoking and alcohol and substance misuse cessation and those with mental health problems. Patients were then signposted to the relevant service.
- A drug and alcohol service was available by appointment and smoking cessation advice was available from a local support group.

The practice had a comprehensive screening programme. QOF data from 2014/2015 showed the practice's uptake for the cervical screening programme was 85%, which was similar to the local CCG average of 82% and similar to the national average of 82%. There was also a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Data from 2014/2015 showed childhood immunisation rates for the vaccinations given were relatively high and were lower than the local CCG and national averages for children aged 12 months, two and five years. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 33% to 89% and for five year olds from 53% to 92%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for people aged 40–74. QOF data from 2014/2015 showed the percentage of patients aged 45 or over who had a record of blood pressure testing in the preceding five years was 95%. This was similar to the local CCG and the national average. Appropriate follow-ups on the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed throughout the inspection that members of staff were courteous and very helpful to patients and they were treated with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations and that conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

We spoke with 17 patients during the inspection. They had varied positive and negative comments about the service. For example, some patients said staff were polite and helpful and treated them with dignity and respect and other patients described the difficulty in getting appointments and that appointment waiting times were too long. We were told that staff responded compassionately when they needed help and provided support when required. However, patients completed 15 CQC comments cards and comments were generally positive about their care.

Results from the national GP patient survey published in July 2016 showed patients were satisfied with how they were treated and that this was with compassion, dignity and respect. The practice results were generally similar to or below the local CCG and national average for questions about consultations with GPs and similar to or below the local CCG and national average for consultations with nurses. For example:

- 78% said the GP gave them enough time compared to the local CCG average of 84% and national average of 87%.
- 81% said the GP was good at listening to them compared to the local CCG average of 85% and national average of 89%.

- 80% said the last GP they spoke to was good at treating them with care and concern compared to the local CCG average of 83% and national average of 85%.
- 90% said they had confidence and trust in the last GP they saw compared to the local CCG average of 94% and national average of 95%.
- 92% said the nurse gave them enough time compared to the local CCG average of 93% and national average of 92%.
- 90% said the nurse was good at listening to them compared to the local CCG average of 91% and national average of 91%.
- 85% said the last nurse they spoke to was good at treating them with care and concern compared to the local CCG average of 91% and national average of 91%.
- 99% said they had confidence and trust in the last nurse they saw compared to the local CCG average of 98% and national average of 97%.
- 73% patients said they found the receptionists at the practice helpful compared to the local CCG average of 85% and national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients we spoke with told us that health issues were discussed with them and they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the questionnaires we received was also generally positive and aligned with these views.

Results from the national GP patient survey published in July 2016 showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. The practice results were generally similar to the local CCG and below national average for questions about consultations with GPs and similar to the local CCG and national average for consultations with nurses., for example:

- 80% said the last GP they saw was good at explaining tests and treatments compared to the local CCG average of 83% and national average of 86%.

Are services caring?

- 72% said the last GP they saw was good at involving them in decisions about their care compared to the local CCG average of 77% and national average of 82%.
- 89% said the last nurse they saw was good at explaining tests and treatments compared to the local CCG average of 91% and national average of 90%.
- 81% said the last nurse they saw was good at involving them in decisions about their care compared to the local CCG average of 87% and national average of 85%.

Staff told us that translation services were available for patients who did not have English as a first language and there was the facility to translate information on the practice website into other languages.

Patient and carer support to cope emotionally with care and treatment

There was information available in the waiting room for patients about how to access a number of support groups and organisations. Discussions with staff and feedback from patients demonstrated staff were highly motivated and were inspired to offer care that was kind, caring and supportive and that met the needs of the population.

The practice had a carer's register in place. The practice had identified 1.3% of its patient list as carers for patients. Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and the CCG to secure improvements to services where these were identified. For example, the practice worked with the CCG and community professionals to identify their patients who were at high risk of attending accident and emergency or having an unplanned admission to hospital.

The continuing support to patients registered as part of the Violent Allocation Scheme (VAS) was integral to ensuring high quality continued care. For example, the practice offered a 'non-judgemental' service to patients registered in this scheme and completed a risk assessment for all patients registering including a 12 month rehabilitation period. Patients were then offered an opportunity to register with a practice of their choice. Since the start of the scheme the practice manager told us that approximately 50% of the patients that originally registered had chosen to remain with the practice.

The practice had implemented a system whereby homeless people could use services directly at the practice. For example; the practice had organised support evenings on the practice premises where a stall was set up to distribute clothing, warm food, drinks and toiletries to homeless people. Staff also searched the local area of Hull City to hand out provisions to homeless people. This service was communicated to homeless people via different community channels for example; hostels, soup kitchens and word of mouth.

Services were planned and delivered to take into account the needs of different patient groups and to help provide flexibility, choice and continuity of care. For example;

- The practice offered specific alcohol and smoking cessation counselling for patients.
- The practice had a high number of non-English speaking patients and were in consultation with the CCG about the possibility of introducing practice based interpreters.
- There were longer appointments available for people with a learning disability.
- The practice offered support for refugees and homeless patients.

- Appointments could be made on line, via the telephone and in person.
- Telephone consultations were available for working patients who could not attend during surgery hours or for those whose problem could be dealt with on the phone.
- Home visits were available for older patients and patients who would benefit from these.
- Urgent access appointments were available for children and those with serious medical conditions.
- There were disabled facilities and translation services available.

Access to the service

The practice was open between 8am and 6.30pm Monday to Friday. Nurse led appointments were available from 8.30am to 12pm Saturday Nurse led appointments were available from 8.30am to 12pm at another site location. The practice, along with all other practices in the Hull CCG area had a contractual agreement for NHS 111 service to provide Out of Hours (OOHs) services from 6.30pm. This had been agreed with the NHS England area team.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was mixed when compared to the local and national averages.

- 72% of patients were satisfied with the practice's opening hours compared to the local CCG average of 77% and national average of 76%.
- 37% of patients said they could get through easily to the surgery by phone compared to the local CCG average of 67% and national average of 73%.
- 65% of patients described their experience of making an appointment as good compared to the local CCG average of 70% and national average of 73%.

Listening and learning from concerns and complaints

The practice had a system in place for handling complaints, concerns, comments and compliments.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.

Are services responsive to people's needs? (for example, to feedback?)

- Information was available to help patients understand the complaints system. Information was on the practice website, in the patient information and complaints leaflets.

The practice had received 30 formal complaints, comments and concerns in the last 12 months as well as 16

compliments and these were satisfactorily handled and dealt with in a timely way. Lessons were learnt from concerns and complaints and action was taken as a result to improve the quality of care.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement and staff understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and these were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- There was a programme of continuous clinical and internal audit which was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

The GPs and the practice manager in the practice had the experience, capacity and capability to run the practice and ensure high quality care. They prioritised safe, high quality and compassionate care. The GPs were visible in the practice and staff told us that they were approachable and always took the time to listen to all members of staff.

The provider was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents.

When there were unintended or unexpected safety incidents:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- They kept written records of verbal interactions as well as written correspondence.

There was a leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- It had gathered feedback from patients through surveys, patient feedback forms and complaints/comments received. The PPG had 12 full time members in the group and met on a regular basis every six weeks to eight weeks. An example of improvements suggested were implementing a separate telephone line for patients to contact when a repeat prescription was required to enable the main reception telephone line to be kept less busy. The PPG member we spoke to told us that this system was implemented last year.
- The practice had gathered feedback from staff through staff meetings, appraisals and general discussions. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.
